### **INVERTED “V” R&P GATE**

Our most popular gate system, the Inverted “V” Rack & Pinion Gates are perfect for most Chicken, Hog, Turkey and Fish Feeds. They come standard with a manual crank with Air Gates being an option. These gates are available with any of our “Cube” Configurations.

Sibley, IL

### **HORIZONTAL R&P GATES**

Becoming Increasingly Popular, our Horizontal R&P Gate system allows producers to haul “sticky” and hard-flowing feeds. We utilize a single or double rack & pinion set-up depending on the length of compartment, and allows a full 25” opening in the bottom with no restrictions to keep feed from falling into the trough.

Maria Stein, OH

### **DROP GATES**

A gate style that’s been around for ages, the Drop Gates offer years of trouble-free operation. Instead of using cables, Hensley has designed the drop gates using steel rods and heavy-duty hinge, greatly reducing repair costs due to broken cables and worn out gate hinges. They come with or without removable handles.
